

Log Store / Stand Fitting Instructions

The following instructions are suitable for the installation of your log store or stand. The images shown are of the log store, which is fitted identically.

Do not install whilst the stove is hot or in use. Observe safe working practices (please refer to the appropriate stove installation guide) whilst installing.

The stove assembly is very heavy. Enlist the help of one or more persons to assist in the lifting of the stove onto this log store or stand. We recommend temporarily removing doors, grate bars, fuel retainers and ash pans to reduce the weight of the stove therefore easing installation.

The log store/stand has been designed and tested to be used for the storage of wooden logs only.

Under no circumstances should any flammable material or solid fuels be stored within the vicinity of the stove or log store/stand area.

Small children and pets should be kept away from the log store/stand compartment, by a suitable fire guard conforming to BS 8423:2002.

Included parts

1 x Log store / stand 2 x Washers

2 x Screws

2 x Wing Nuts

Step 1

You will need to remove self-levelling feet from your stove if they have already been fitted.

Step 2

With the assistance of other people, lift the stove vertically onto the log store/stand whilst keeping it in line with the log store/stand.

Take care. Your stove is heavy!

Step 3

Log store / stand Stove foot

Rear view of stove and stand combination

Use the washer, screw, and wing nut to secure the stove to the log store/stand.
